

# Social event planner: WhenWeekly

## Description:

An app that lets people plan social events together, by selecting the date and times that work for them. The organizer will then see what days/times are available for most/all (the time slot will be highlighted green).

## Scope:

The app is a calendar extension that helps organize social events.

## Target Audience:

People that need help with organizing social events in a clean and orderly(?) fashion.

## Core functional requirements:

- Functionality 1: Ability to create a “schedule-lobby”
- Functionality 2: The organizer must see all responses/requests
- Functionality 3: Invite members via Link
- Functionality 4: Members input their name when sending their response
- Functionality 5: Delete button on Event

## Non-functional requirements

- Item 1: Will only work on Android
- Item 2: Communication with server will be TLS encrypted
- Item 3: No accounts

## Competitors:

Google calendar  
Doodle

## Your contributions (novelty):

It should be the fastest option for scheduling, as should take almost no time.

Creating an event: 1 minute

Selecting your preferred date and time : 1 minute

Seeing the results of user's preferred time: instant

The application only saves the following data:

- Event
- Date
- Name of owner/member
- Selected dates of owner/members

## Mock-up
